SMARTBRIDGE PROJECT SUBMISSION

Auto Ticket Classification using Flow Designer

PHASE 5

Project Development

Date	**30 September 2026**
Team Id	**SWTID-2026-4922**
Team Leader	**Mohamed Saheen**
Team Members	**Rohith C P,Maha lekshmi E K, Nowfal A,Abishek X**
Project Name	**Auto Ticket Classiification Using Flow Designer**

Technology: ServiceNow – Flow Designer

Role/Project Area: ServiceNow Administrator

1. Development Overview

The Auto Ticket Classification system was developed using ServiceNow and Flow Designer.

2. Development Activities

- Created the "Project Update Set" and made it the current Update Set.
- Created the "Incident Workflow" custom table to store IT ticket records.
- Created the required fields with appropriate data types, choices and reference fields.
- Configured the Subcategory field as dependent on the Category field.
- Created the Flow named "Auto Classify School IT Tickets".
- Configured the flow trigger for a newly created Incident Workflow record when Category is empty.
- Added classification branches for Wi-Fi, Projector, Password/Login, and Slow/Hanging issues.
- Added an Update Record action for each classification branch.
- Added a Send Email action to notify the caller.

• Activated the completed flow.

3. Supplied ServiceNow Development Evidence

The screenshot below shows the completed flow execution for the project. The trigger was executed and the Wi-Fi/Network condition was evaluated as True, followed by a completed Update Record action.

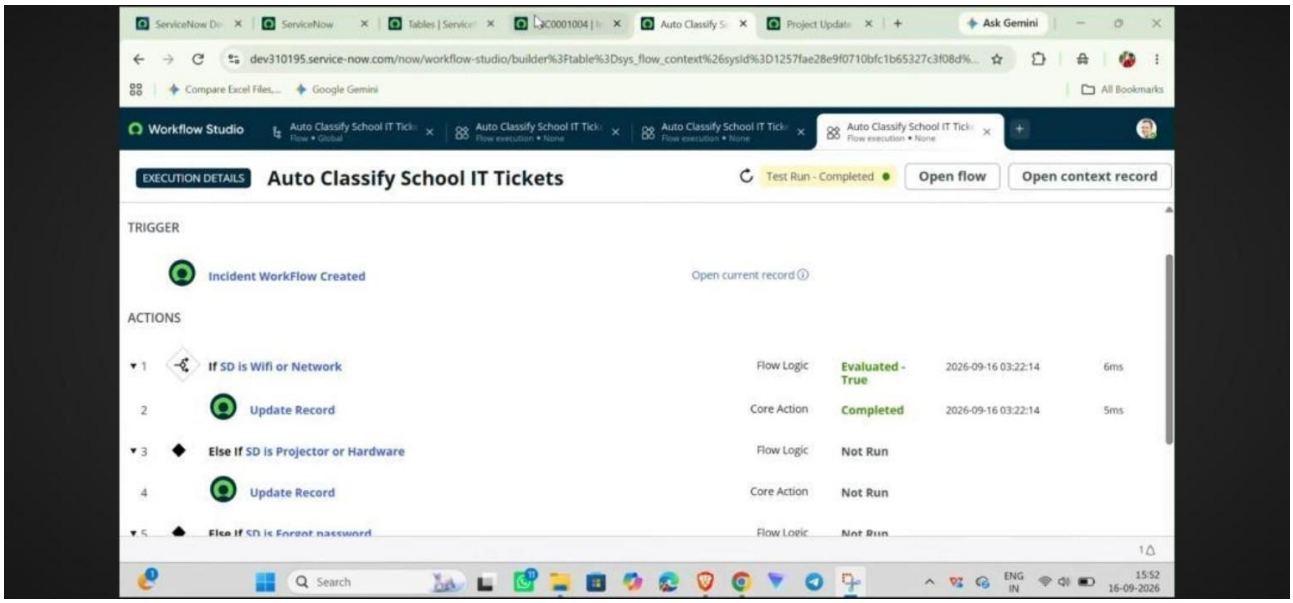

Figure 1. Flow execution showing the Auto Classify School IT Tickets flow and successful Wi-Fi/Network branch execution.

4. Development Result

The system automatically classifies newly created IT support tickets without requiring the user to manually select the Category and Subcategory.
