SMARTBRIDGE PROJECT SUBMISSION

Auto Ticket Classification using Flow Designer

PHASE 6

Project Documentation

Date	**30 September 2026**
Team Id	**SWTID-2026-4922**
Team Leader	**Mohamed Saheen**
Team Members	**Rohith C P, Maha lekshmi E K, Nowfal A, Abishek X**
Project Name	**Auto Ticket Classification Using Flow Designer**

Technology: ServiceNow – Flow Designer

Role/Project Area: ServiceNow Administrator

1. Introduction

The Auto Ticket Classification using Flow Designer project provides an automated solution for classifying school IT support tickets using ServiceNow.

2. Problem Statement

The school IT helpdesk receives multiple incident requests daily from students and teachers, including Wi-Fi issues, projector failures, password problems, and slow computers. Manual classification requires IT staff to review every request and select the correct category.

3. Objectives

- Automatically classify incidents at the time of creation.
- Reduce manual effort for IT agents.
- Improve ticket routing efficiency.
- Implement a no-code, easily maintainable solution.

4. Requirements

- Automatic classification based on issue description.
- Automatic Category and Subcategory assignment.
- Dependent Category/Subcategory logic.
- Automated email notification.
- Structured ticket information.
- Easy maintenance and future scalability.

5. Implementation

A custom Incident Workflow table was created with fields for Number, Caller, Category, Subcategory, Short Description, Description, State, Assigned Group and Assigned To. The Subcategory field was configured as dependent on Category.

6. Flow Designer Automation

A flow named "Auto Classify School IT Tickets" was created. The flow uses a record-created trigger and checks the short description for predefined keywords. It then updates the record with the appropriate Category and Subcategory and sends an email notification to the caller.

7. Classification Logic

Issue	Category	Subcategory
WiFi / Network	Network	Wi-Fi
Projector	Hardware	Projector
Password / Login	Access	Forgot Password
Slow / Hanging	Performance	Slow Computer

8. Testing

Testing validates that the flow automatically assigns the expected Category and Subcategory for different incident descriptions and that email notification is generated for the caller.

9. Conclusion

The Auto Ticket Classification using Flow Designer project provides an automated solution for classifying school IT support tickets. The system identifies the issue from the ticket description, assigns the appropriate Category and Subcategory, and sends an email notification to the caller after ticket creation.

The project reduces manual classification work and provides a structured and maintainable solution using ServiceNow Flow Designer.

10. Future Enhancement

The solution can be extended in the future with additional automation features such as assignment automation, SLA tracking, or predictive intelligence.

Screenshot note: No additional screenshot is inserted here because the two supplied screenshots have already been placed in the relevant Development and Testing phases.
